

PRODUCT DATA SHEET

Rust Preventive / VG-101

VOC compliant

Automobile Manufacturer Engineering Approved.

Features: Wax based, amber, anti –corrosive formula installed using the no-holes-drilled atomizing method. Exceeds – ASTM-B117

Benefits: Outstanding corrosion protection and crevice penetration. Simple to install using the proven effective atomizing method of application. Preserves the vehicle body from expensive and dangerous rust through. No holes drilled means no destruction of the factory paint film, no compromise to the structural integrity of the vehicle.

Uses: Vehicle body cavities, electrical connections, marine, agricultural, industrial, virtually anything that rusts! For specific application on other than vehicles contact our technical department for installation protocol.

Directions: Use at the rate of one 32 oz bottle per average size vehicle. Use VG-107 equipment, spraying product into all body cavities. See instruction manual for more details.

Tips: Be sure that installation lances are not clogged prior to use. A clogged lance may be cleared by immersing it in hot water and, after a few minutes, blowing compressed air through the lance. Shake bottle thoroughly before use, store at room temperature.

Sizes: VG-101 = 12 quarts per case
VG-101K = 16 gallon keg
VG-101D = 55 gallon drum
